ASAD ALI

Web Developer & QA Engineer | Framer · Webflow · WordPress

asad0236itachi@gmail.com | asad778-code.github.io | linkedin.com/in/asad-ali-3b2017327 | github.com/Asad778-code

SUMMARY

Web developer who designs and builds client websites end to end — from a Figma file to a live, responsive, SEO-ready site in Framer, Webflow and WordPress (Elementor, WooCommerce). Also the QA Master for a software agency, so every site is tested page by page before it ships. Comfortable with the Linux servers, DNS and SSL that sit behind the sites. BS Computer Science student (5th semester).

EDUCATION

BS Computer Science — PMAS Arid Agriculture University, Rawalpindi (5th semester) 2024 – 2028 (expected)

EXPERIENCE

VConekt (software agency) — Web Developer & QA Master Jul 2026 – Present

Build client websites and lead quality assurance; made the team's QA Master in Aug 2026.

Web development

- Build client websites start to finish in **Framer, Webflow and WordPress** (Elementor, WooCommerce): layout from Figma, CMS setup, on-page SEO and a design that holds up on every screen size.
- Recent builds: **Money Days** — a Toronto currency-exchange site with a live exchange-rate board, calculator and two store locations; **Aaron Signature** — a gold & jewellery store with a WooCommerce shop, live metal prices and repair / private-loan service pages.
- Also shipped **Nordic Nexuz** and **Diamant Versatile** in Framer (CMS blog; filterable product catalogue) and **Green Flow Solution** in WordPress (services site with a searchable knowledge centre).
- Migrated a live trading academy (malikfxacdemy.com) from **Tutor LMS to MasterStudy LMS** and rebuilt its filterable course catalogue, keeping the site running throughout.
- Build **Framer and Webflow marketplace templates** to a design-system spec — tokens, CMS, animations and every breakpoint — reviewed against marketplace guidelines.

Quality assurance & testing

- Set the team's **QA standard** — Blocker / Major / Minor severities, a GO/NO-GO release checklist and ClickUp bug reports (steps, expected vs actual, evidence) — and sign off every release.
- Built a **289-case test plan across 26 modules** for an AI voice-agent SaaS (FastAPI, Next.js, PostgreSQL, Redis) and ran its pytest, Vitest and Playwright suites.
- Security-tested web, mobile (Flutter + Supabase over ADB) and microservice apps; found and re-verified critical auth issues such as account self-approval, an open **SUPER_ADMIN** sign-up and an unauthenticated production Redis.

Servers & site maintenance

- Manage the **Linux servers** behind client sites — Docker, WHM/cPanel, DNS and SSL — and run a self-hosted **Mailcow** email system (6 domains, 6 mailboxes, 18 aliases) with a safe MX / SPF / DKIM cutover.
- Fixed production incidents with no data loss: cleared a disk-full server (**88% → 21%**) and brought a WordPress site back from HTTP 500 errors while cutting load time from **~3 s to ~1 s**.

PROJECTS

- **Client websites, built start to finish:** moneydays.ca, aaronsignature.com (WordPress / WooCommerce); nordicnexuz.com, diamantversatile.com (Framer); malikfxacdemy.com, greenflowsolution.com (WordPress).
- **Personal portfolio** (asad778-code.github.io): React, Vite, TypeScript, Tailwind, GSAP and Framer Motion, deployed to GitHub Pages with GitHub Actions.
- **CPU scheduling simulator:** C++ and Python desktop GUI running 9 scheduling algorithms (FCFS, SJF, SRTF, Round Robin and more).

SKILLS

Web development: Framer, Webflow, WordPress (Elementor, WooCommerce), HTML, CSS, JavaScript, TypeScript, React, Tailwind CSS, GSAP, Figma, responsive design, on-page SEO

QA and testing: functional, regression, responsive and mobile testing, test-case design, API and security testing (OWASP Top 10, Nuclei), pytest, Vitest, Playwright, ADB, ClickUp bug tracking

Servers and DevOps: Linux (Ubuntu, AlmaLinux), Docker, Dokploy, Traefik, WHM/cPanel, Apache, PM2, SSH, Git, GitHub Actions, Cloudflare, Mailcow, DNS (MX, SPF, DKIM, DMARC), SSL

Databases and languages: MySQL, PostgreSQL, Supabase, Redis, SQL; Python, C++, Java (Android), Pine Script

AI: Claude Code (AI-assisted development and testing), voice-agent design | **Languages:** English (professional), Urdu (native)
