ASAD ALI

Web Developer & QA Engineer | Framer · Webflow · WordPress · Linux Servers

asad0236itachi@gmail.com | asad778-code.github.io | linkedin.com/in/asad-ali-3b2017327 | github.com/Asad778-code

SUMMARY

Web developer and QA engineer who builds sites in Framer, Webflow and WordPress, then tests them the way an attacker or a picky client would. Runs QA for a software agency across websites, mobile apps and AI voice agents, and manages the Linux servers behind them: Docker, cPanel/WHM, DNS, SSL and self-hosted email. BS Computer Science student (5th semester).

EDUCATION

BS Computer Science — PMAS Arid Agriculture University, Rawalpindi (5th semester) 2024 – 2028 (expected)

EXPERIENCE

VConekt (software agency) — Web Developer & QA Master Jul 2026 – Present

Made the team's QA Master in Aug 2026: set the QA standard and sign off every release.

Quality assurance and security testing

- Wrote the team's QA standard: fixed Blocker / Major / Minor severity rules, a GO/NO-GO release checklist, and ClickUp bug reports with steps, expected vs actual result and evidence.
- Built a **289-case test plan across 26 modules** for Voicecon, an AI voice-agent SaaS (FastAPI, Next.js, PostgreSQL, Redis), and ran its pytest, Vitest and Playwright suites. A Nuclei scan found a **production Redis open to the internet with no password**; reported it with fix steps.
- Security-tested a Flutter + Supabase mobile app on real Android phones over ADB. Found a **Blocker that let users approve their own accounts** through the REST API and a release signed with a debug key, then re-tested the developer's fixes against the live backend.
- Ran a 14+ microservice car-auction platform locally in Docker and found that the public sign-up let **anyone register as SUPER_ADMIN**, with a reproducible bug report.
- Audited a WordPress theme for ThemeForest (**6 Blockers, 17 Majors**, including stored XSS), then shipped the fixed v1.0.1 package, cutting it from 54.9 MB to 5.6 MB.

Servers, DevOps and email

- Deployed a **self-hosted Mailcow mail server** in Docker on an Ubuntu VPS behind Dokploy/Traefik with Let's Encrypt SSL, then built a client's email system on it: **6 domains, 6 mailboxes, 18 aliases**, with a DNS cutover plan (MX, SPF, DKIM) that keeps live mail running.
- Fixed a production disk-full incident: traced it to a **131 GB runaway container log** caused by a read-only Redis error loop, brought disk use from **88% to 21%** and added Docker log rotation.
- Brought a WordPress site on a WHM/cPanel (AlmaLinux) server back from HTTP 500 errors (missing PHP cURL module, corrupted plugins), cut page load (TTFB) from **~3 s to ~1 s**, and repaired **159 posts** with broken images using a WP-CLI script.
- Investigated a deleted production database: traced access logs, removed an unknown SSH key and remote database login, blocked the source IP and kept checksummed evidence.

Web development and AI

- Build and maintain client sites in Framer, Webflow and WordPress (Elementor, WooCommerce); moved a live academy site from Tutor LMS to MasterStudy LMS and built its filterable course catalog.
- Built AI voice agents on Voicecon (e.g. a limo-booking agent with booking workflows, live call transfer and service-area checks) and a 20-tool car-dealership Messenger agent prompt.
- Built TradingView Pine Script indicators and tested their win rate on real market data with Python.
- Helped hire UI/UX designers: reviewed CVs and design tasks, ran live Figma tests and scored candidates.

PROJECTS

- **Client websites, built start to finish:** nordicnexuz.com and diamantversatile.com (Framer); malikfxacdemy.com and greenflowsolution.com (WordPress).
- **Personal portfolio** (asad778-code.github.io): React, Vite, TypeScript, Tailwind, GSAP and Framer Motion, deployed to GitHub Pages with GitHub Actions.
- **CPU scheduling simulator:** C++ and Python desktop GUI running 9 scheduling algorithms (FCFS, SJF, SRTF, Round Robin and more).

SKILLS

QA and testing: functional, regression, responsive and mobile testing, test-case design, API and security testing (OWASP Top 10, Nuclei), pytest, Vitest, Playwright, ADB, ClickUp bug tracking

Web: Framer, Webflow, WordPress (Elementor, WooCommerce), HTML, CSS, JavaScript, TypeScript, React, Tailwind CSS, GSAP, Figma

Servers and DevOps: Linux (Ubuntu, AlmaLinux), Docker, Dokploy, Traefik, WHM/cPanel, Apache, PM2, SSH, Git, GitHub Actions, Cloudflare, Mailcow, DNS (MX, SPF, DKIM, DMARC), SSL

Databases and languages: MySQL, PostgreSQL, Supabase, Redis, SQL; Python, C++, Java (Android), Pine Script

AI: Claude Code (AI-assisted development and testing), voice-agent design | **Languages:** English (professional), Urdu (native)
